Email: jm_lsr@foxmail.com
University: Great Bay University
GitHub: <https://github.com/Astra-Ranger>

Phone: 13631882699
Major: Artificial Intelligence

Education

Great Bay University **Undergraduate in Artificial Intelligence** Sep 2025 - Present
GPA: 3.70 / 4.00 (Top 15%)
Advisor: [Xiaodong Cun](#) (Assistant Professor at GBU and Researcher at Tencent ARC Lab)

Internship Experience

AI Lab, Intellindust Co., Ltd. **Research Intern (Computer Vision)** Jul 2026 - Present
Advisor: [Xi Shen](#) (Co-founder and Chief Scientist at Intellindust)

- Researching parameter-efficient inference for edge-side vision models, with a focus on improving robustness in complex scenarios under limited compute and deployment constraints.

Projects & Competitions

Virtual Photography System via Spatiotemporal Video Matting and Dynamic Relighting Mar 2026 - Present
Project Lead | National-level Innovation and Entrepreneurship Training Program for Undergraduates
Deep Learning / PyTorch / SAM2 / Video Matting / Multi-GPU Training

- Developed a SAM2-prior-driven spatiotemporal matting and dynamic relighting system to address temporal flickering, boundary-detail loss, and lighting inconsistency in virtual photography.
- Independently reviewed 20+ CCF-A papers, reproduced the MatAnyone video matting baseline, and trained on VM240K and related datasets using eight RTX 4090 GPUs; identified insufficient encoder detail and introduced skip connections to improve it.

CS101 Copilot (Intelligent Learning Assistant for Introduction to Computer Science) Apr 2026 - May 2026
Project Lead | RAG Learning Assistant | Flask / ChromaDB / LangChain / JavaScript
GitHub: <https://github.com/Astra-Ranger/CS101-Copilot>

- Built a course-grounded RAG assistant to address the difficulty general-purpose assistants face in accurately covering the extensive original material in CS101.
- Led the implementation of seven core features, including RAG-based Q&A, mind map generation, digital-human explanations, and AI-powered note autocomplete.

Campus Cafe Ordering Platform Feb 2026
Independent Project | Full-Stack Development and Server Deployment | FastAPI / SQLite / JavaScript

- Built a customer ordering and staff management platform to improve inefficient offline ordering and centralize fragmented menu and order operations for a campus cafe.
- Independently delivered the FastAPI backend, SQLite data layer, frontend, access control, and production deployment. The platform is in active use and has supported 30+ concurrent customers at peak.

AI Plan Table for HarmonyOS Apr 2026 - May 2026
Project Lead | 2026 HarmonyOS Innovation Race | HarmonyOS / ArkTS / ArkUI
GitHub: <https://github.com/Astra-Ranger/HarmonyPlanTable>

- Designed an Eisenhower Matrix task-planning app to address the inability of ordinary calendar apps to prioritize listed events or provide context-aware suggestions.
- Implemented five core capabilities: an ArkTS / ArkUI task board, Preferences-based persistence, deadline reminders, AI task parsing, and AI recommendations.

Skills

Programming	Proficient in Python (PyTorch, NumPy), JavaScript, and HTML / CSS
Algorithms	Transformer / ViT; video matting / instance segmentation; model training / evaluation; RAG development
Engineering	Linux / Git; server cluster setup; dependency and training configuration troubleshooting
AI Collaboration	Claude Code / Codex for requirement decomposition, development, debugging, and Skill workflows
General	CET-4; English technical reading; VS Code / Jupyter Notebook / Photoshop

Summary

Artificial Intelligence undergraduate focused on computer vision and LLM application engineering, with experience in video matting experiments, RAG system development, and full-stack project delivery, and a strong enthusiasm for exploring frontier AI technologies. Capable of literature review, code reproduction, model training, server deployment, and project delivery.
